Our quality managementsystems:

Full LPG logistical services

INTRODUCTION

The Central-European Gasterminal Co. (KEG Nyrt.) is the youngest gas trader of Hungary. Taking advantage of the geographical features the gasterminal wishes to decrease the expenses of logistics (storing and transporting) in order to change positively the competitiveness of liquid propane-butane gas (LPG) in the competition of the energy carriers.

Beside this goal our experts help the market with numerous innovations in order to increase safety and to extend the circle of consumers. The main target of the Central-European Gasterminal Co. is to ensure the Hungarian consumers' security of gas supply and it also builds up connections with the surrounding countries.

Our company has development plans for years ahead, which makes it possible to broaden our place in the market. Beside building 4 x 4000 m³ underground „cigars” this plan is helped also by the first Hungarian LPG harbour on the Danube and the project of storing gas underground, which is a novelty in the region.

The results of our enterprise speak for themselves. The products with safety valves belong to the Stafétagáz® product family (5 kg, 11 kg, 45kg) have been acknowledged twice as great innovations and sold with the recommendation of the National Disaster Protection Management.

At present the storing capacity of our terminal is about 5000 m³ which we expand intensively. Our industrial railway track branching off from the Wien-Budapest railway line is capable of receiving the most modern carriages and long trains.

CYLINDER FILLING & DISTRIBUTION

Our corporation started selling LP gas-cylinders in 2001. Since then our network of dealers selling gas cylinders has grown into a nationwide network. Among our partners who use our products in the field of industry, agriculture or engineering such references can be found like Hídépítő Zrt (Bridge-builder Co.) and the Inreco Hungary Ltd. We can offer any type of gas-cylinders that can be found in Hungary (11,5 kg aluminium household cylinder, 23 kg aluminium household cylinder and the 11 kg motoric gas-cylinder for fork-lifts). Beside the traditional gas-cylinder types our company is the only one in Hungary which sells 5, 11 and 45 kg steel, non-explosive gas-cylinders equipped with safety valves that have had EU quality certificate for 10 years. Within the type of fork-lift gas we can also offer cylinders with quick connection and threaded steel or aluminium cylinders to our customers.

Filling up our cylinders has been done in our factory in Dunaalmás since 2002 in accordance with the safety regulations and the ISO quality system. The quality of our LPG meets the regulations of MSZ-EN 1601 standard.

BULK BUSINESS

We supply numerous industrial and household customers with our heating-gas services in containers. We have contracts with bakeries, metal-cutter factories, agricultural crop transporters and asphalt mixer factories. We also provide car gas service nationwide. The quality of car gas meets the MSZ-EN 586 standard. For request we can design, authorize, install, maintain and periodically supervise systems with containers. For our contractors we also do wage storing as a new service.

LPG LOGISTICAL CENTER

The KEG Nyrt. can provide a full logistic service for its partners in the region since its location is geographically favourable and the Danube is very close. We also have railway capacity, our technology is capable of receiving European and Russian trains. With our container trucks we are able to carry LPG anywhere in the country, and servicing the neighbours.

As a future we can develop the „cigar”-park with an other 3 units (each 4000 m³) with ADR port and underground storage which increase the nation's security of gas supply. LPG arriving on water expands the possibilities for import and makes purchasing cost effective.
